

The Day Mainstream Science Died

by Miles Mathis

First written May 19, 2022

In the future, today will be known as the day mainstream science died. It has been on a ventilator for decades, with only the faintest pulse, but today it flatlined. They have been battling me for two decades, slandering me with every tooth in their heads, trying to prop themselves up with any stick or self-award at hand, but today the buzzer sounded. The game is over and they got demolished in all four quarters. The final score is too embarrassing to even add up or post, and I will leave it to future historians to quibble over the numbers. While I was scoring 300, did anyone else even score a point? Did anyone even get the ball into the air? Did anyone even get a dribble that didn't go off his own foot? You decide.

Neptune is aligning to Jupiter, the Sun, and the galactic core even as you read this, and solar flux is hugely spiking, [up to 180 today](#). *Just as I have been predicting for years.* This solar cycle is proceeding exactly as I charted it, more than double the mainstream prediction. It hit my predicted spike in December 2020, when Jupiter aligned to Saturn, and it is now hitting an even larger spike with Neptune, again right where I predicted it. They tried to pass off my first hit as a lucky guess, but hitting two planetary conjunctions and two spikes right on the head cannot be passed off as luck or coincidence.

[I previously published all the flow charts](#), clearly showing the mechanics that created them, so it is over. Those flow charts could not have been created with any other theory than my charge recycling/unified field theory, so that theory is proved. No one else has ever published that theory, so there is no doubt who it belongs to. My theory of charge and unification is unique and is published in copyrighted books. Furthermore, the mainstream has expressly given it to me, since they didn't want it.

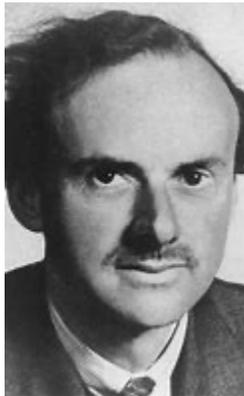

They have ridiculed me for it for years, see places like RationalWiki. They refused to publish it because it contradicted their dogma going back centuries, regarding the gravity-only theory of celestial mechanics that has been ascendant since Newton.

But my charge/unification theory isn't just being proved in Solar theory, it is being proved across the board, in dozens of big subfields. [My theory of charge recycling by the nucleus](#), and thereby my nuclear architecture, is being proved with every new experiment that is published. We have seen that my *Lift on a Wing* paper is viral and has been for years, despite being censored by Google, and that also concerns charge. My related recent paper on how a sail works immediately went to the top of search lists, despite again being suppressed by Google. My relativity papers are considered the gold standard of Einstein critique. [My theory of transport](#) has revolutionized biology. Likewise for my papers on [Plate Tectonics](#), the [Earth's core](#), [Bode's law](#), [superposition](#), the [fine structure constant](#), the [Schrodinger Equation](#), [galactic rotation](#), [the orbit](#), the [Lagrangian](#), [spin mechanics](#), [unification](#), the [Compton Effect](#), the [Drude-Sommerfeld model](#), [Anderson Localization](#), [Rayleigh Scattering](#), [Maxwell's equations](#), [comets](#), [electron bonding](#), [rainbows](#), [color theory](#), the [Stefan-Boltzmann Law](#), and literally hundreds of others. I have now published over 30 volumes of cutting-edge science, and every paper I write immediately outranks all university and government sites. At least until Google targets it.

Some have complained that it is sad to see me promoting myself, and I agree. It is a tragedy I have to. But I don't expect any film crews from *The New York Times* or MSNBC or FOX to be arriving at my house today, asking me how it feels to be the first person in history to predict a Solar Cycle. For I have a further prediction: not one person will call or write to congratulate me, and especially not anyone from the mainstream. No one will concede defeat, apologize, or offer any other olive branch. No one will hire me for further research on this or anything else I have worked on. I expect only an increase in the lies, slander, and suppression.

You may say I should at least wait and see. Maybe this is the event that will turn the tide. Yeah. My readers have been saying that for years. "This is the paper they can't ignore, the data they can't refute, the argument they can't defeat". "This is the one that wins you the Nobel". Except that science isn't about that anymore, and never really was. It isn't about data, argument, theory, or papers. It is about funding make-work projects for fake "scientists", and those people will never let me into any of their fields. If they did, large parts of those fields would immediately collapse and turn to dust. Yes, other fields of research would open up, but it would require a nearly complete personnel change worldwide, with all these current people flushed out. They know that, so they resist the revolution with every fiber of their being. Their brittle bureaucracies will become even more ossified and entrenched, and they will demand even more protection from Big Tech. They will not fall until the larger revolution collapses all corrupt institutions, which is why I am also working on that.

To remind you what I am up against, I tell you again the contemporary physicist is one of the most loathsome creatures ever spawned by planet Earth. He (or she) is, at the same time, both smug and paper thin. He is supercilious but empty. Tyrannical but with no natural authority. Arrayed in prizes and promotion, but absolutely bereft of any real answers. Proud with nothing to be proud of. Preening as if oozing charisma, but with no charisma. The very definition of a stuffed headpiece. And you can tell this at a glance:

The Speed of Light is NOT About... X

father brown

s NOT About Light

2010

That is Weinberg, Pauli, Susskind, Dirac, Feynman, Sean Carroll, Matt O'Dowd, Witten, Guth, and Sabine Hossenfelder. I have been accused of being self-satisfied or confused, but honestly, who looks self-satisfied and/or confused? Those people or me:

That is me at age 57. So if I am, as some of them claim, in a spiral of self-destruction, I appear to be taking it pretty well.

Then again, why wouldn't I be cheery? I just predicted a Solar Cycle. I achieved unification. I unwound the fine structure constant. I solved the Bode sequence. I clarified the calculus. I corrected the Lagrangian. I explained superposition. I explained transport in plants. I explained the heat of the Earth. I corrected Relativity. I rewrote bonding theory. I discovered the nuclear architecture. What did any of those people do? Nothing. It was all bluster and promotion. For most contemporary physicists, like Carroll and O'Dowd and Hossenfelder, it wasn't even that.
